### APPLICATION DIRECTIONS

1. Surfaces to be wrapped must be clean and dry. Any oil or grease must be removed.
2. Any burrs or sharp edges must be removed or smoothed.
3. Before tape application, all bare pipe and fittings to be wrapped must be coated with PASCO PIPE PRIMER.
4. Weld beads shall be covered with one wrap or layer of tape prior to spiral wrapping.
5. Tape shall be spirally wrapped the length of the pipe using one half lap for double thickness or 1/2" overlap, depending on the individual installation.
6. When pipe is mill coated, tape must be used on the fittings and joints. To wrap a joint, first coat joint with primer. Joint shall be wrapped with tape spirally beginning on the mill coating 3" from joint. Cover joint and end tape on mill coating 3" past joint.

**Pipe Thread Seal Tape - PTFE**

- Seals and makes joints leaktight regardless of pipe material or fluid. Just a quick wind around male joint. This pure PTFE tape resists temperatures from -450° to +500° F. Ideal for steam lines, heating, cooling and cryogenic systems, oil refinery pipes, aircraft fittings and missile systems. Averages less than a cent per application, eliminates liquids, pastes and brushes.
- **THE VERSATILE SEALANT**  
**PASCO** PTFE tape will seal all threaded joints-any material: copper, brass, cast iron, aluminum, monel, stainless steel, plastic, synthetic rubber, glass, or ceramic. In addition to resisting high and low temperatures, it can be used for high pressure or vacuum-liquid or gas.
- **KEEPS THREADS INTACT**  
 Self lubricating **PASCO** PTFE tape makes assembly or disassembly easy. Eliminates the need for over tightening. Prevents galling, seizing and cross threading.
- **MINIMUM MAINTENANCE**  
 PTFE tape remains impervious to the most corrosive fluids for the life of the joint. Won't dry out, crack, melt, or dissolve. Stands up to maximum pressures and vibration.
- **MEETS MIL SPEC T-27730A**
