

DRAINS CORRODED? PROBLEM SOLVED!

STEEL
Stainless
TUBULAR

Stainless steel tubular is *stronger*
and *more corrosion resistant* than
17 gauge brass tubular.

Advantage

*Meets ASME A112.18.2 and
CSA B125.2 standards for
tubular drainage products.*

*Stainless steel tubular has a
lifetime corrosion resistance
of citric acid, fruit juice, milk,
nitric acid, sodium, chloride,
and vinegar, while brass
tubular shows severe
corrosion effects from all of
these materials.*

*No plating is required for
stainless steel, therefore it is
considerably more friendly to
the environment.*

Applications

*Restaurants
Hotels
Hospitals
Schools
Laboratories
Premium Homes*
