

## Concentric Vent Kits

For high efficiency tankless water heaters

- PVC vents simplify installation
- Available in 2", 3" and 4" IPS
- Can be used vertically or horizontally
- Interior screen prevents bird or rodent entry

### Flexible Installation

#### Termination options

Concentric vent kits allows for both exhaust and intake pipes to penetrate the roof or side wall through only one hole.

- Molded cap with socket allows for vent screens and extensions. Cap can be mechanically fastened, allowing for quick removal and easy cleaning.
- Integral fins prevent the cap from sitting flush to the wall, ensuring proper spacing needed for air flow.
- Pipe in pipe design allows for single wall penetration resulting in fewer holes to core & seal.
- Short branch on the Wye makes for a stronger fitting which can be installed in tighter spaces.

Low profile side wall vent kits offer a lower profile alternative to the typical two pipe side wall snorkel termination. They include integrally molded vent screens, and the design neatly disguises both the intake and exhaust

| PART NUMBER | INTAKE SIZE |
|-------------|-------------|
| 22152       | 2"          |
| 22153       | 3"          |
| 22154       | 4"          |

## Replacement Rain Cap for Vents

- For use on intake vent systems
- Available in 2", 3" and 4"

| PART NUMBER | SIZE |
|-------------|------|
| 22157-C     | 2"   |
| 22158-C     | 3"   |
| 22159-C     | 4"   |
