

## “Sure Test” Inflatable Test Plugs

- “Grip-Rib”\* design acts as a suction cup.
- Hard rubber ends are molded inside the plug, without seams, to prevent stem and end blow-off.
- All brass tire stem valves are uniquely molded in the plug end.
- This design prevents the stem from being pulled off.
- Durable chain eye is molded as part of the plug.
- Pull chain is strong, steel sash.
- Inflation and back pressure information is permanently molded in plug.
- Each **PASCO** “Sure Test” inflatable test plug has the patented “Grip-Rib” design. As the plug is inflated inside the pipe, the “Grip-Rib”\* acts as a suction cup to insure a positive seal.

Made in U.S.A.  
U.S. Patent 4,964,439
