

New!

Introducing **STAINLESS STEEL** Heavy Duty - Wall Mount Commercial Faucet

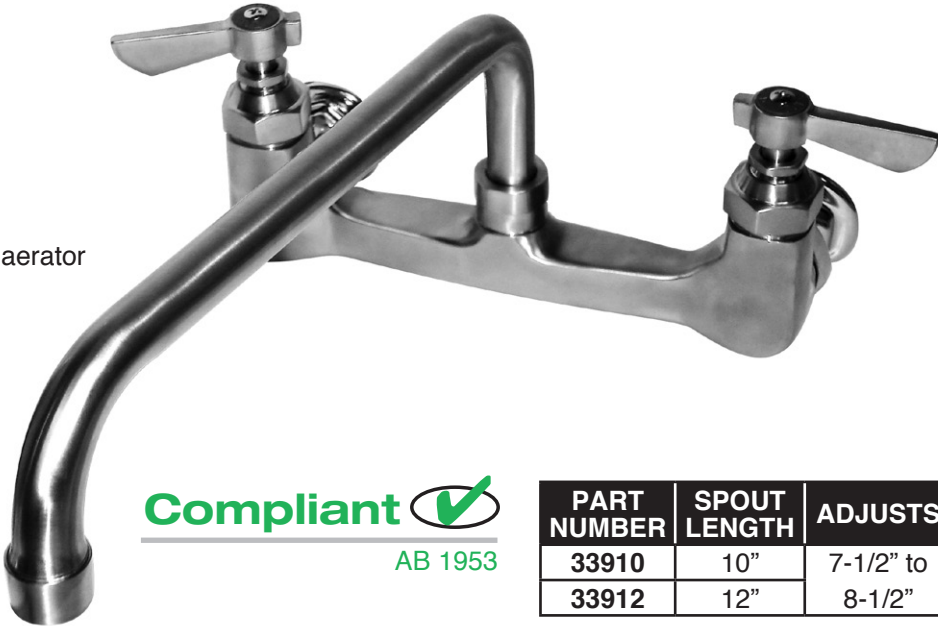

Confused about lead free faucets that actually contain lead? Here's the solution!

Be assured from the start that the faucet you sell is truly lead free...

Introducing the "GREENEST," most economical and truly lead free commercial faucet available to the plumbing trade!

PASCO is proud to introduce its all new
Stainless Steel Heavy Duty Wall Mount Commercial Faucet.

- 100% Stainless Steel is good for the plumber as well as the environment.
- Stainless Steel is made from 60% (or more) recycled material which comes from manufacturing processes as well as "end of life" products.
- Stainless Steel is 100% lead free, which far exceeds the requirements of CA AB1953 and Vermont S.152. These laws actually ALLOW faucets to contain lead.
- No chrome plating. Although the current "lead free" brass faucets on the market may contain a very small amount of lead, they are still required to be chrome plated. Brass faucets require plating that uses heavy metals, acids and other harmful chemicals which are all disposed of after the plating process.
- It's obvious that Stainless Steel is a superior metal in all uses. The finish will never dull, wear or flake off. The stems of these faucets are ceramic which allows for tremendously long use. The heavy duty spout will stand up to the rigors of use in the commercial installation.
- 1/2" FPT Inlets
- Full flow with a quarter turn of the handle
- Twin seal Stainless Steel tubular swing spout
- 55/64" Female water saver aerator

Compliant 
AB 1953

PART NUMBER	SPOUT LENGTH	ADJUSTS
33910	10"	7-1/2" to
33912	12"	8-1/2"
